### **Irritation to respiratory tract**

Dust may irritate throat and respiratory system. Coughing, sneezing and panting may occur as a result of exposure above the occupational exposure limits.

### **Sensitisation**

#### **In case of skin contact**

Eczema can be developed as a result of exposure to dust damp, caused both by the high pH which induces irritant contact dermatitis after prolonged contact, either by an immunological reaction to Cr (VI) soluble which causes allergic contact dermatitis.

#### **In case of inhalation**

not sensitising.

### **Repeated dose toxicity (subacute, subchronic, chronic)**

#### **Subacute inhalation toxicity**

The available evidence indicates clearly that occupational exposure to cement dust content in the product causes deficits in lung function. However, the evidence available at present are insufficient to establish with certainty the dose-response relationship for these effects.

#### **Chronic inhalation toxicity**

There were no chronic effects or effects at low concentrations.
